Medium API Verification Guide

Date: February 8, 2026 **Platform:** Medium Publishing API **Portal:** https://medium.com/ (no dedicated developer portal)

🔴 CRITICAL WARNING

Medium API is officially NO LONGER SUPPORTED as of March 2023.

- ❌ GitHub repository archived (March 2, 2023)
- ❌ No active development or maintenance
- ❌ No guarantee of uptime or functionality
- ❌ Could disappear completely at any moment

- ⚠️ **NOT RECOMMENDED for production use**

📋 What's Still Available?

Publishing API (Limited)

Status: Still works but "unsupported"

Functionality: - ✅ Publish articles - ✅ Fetch basic user info - ❌ No reading/fetching articles - ❌ No analytics/statistics - ❌ No comment management - ❌ No publications management

API Endpoint: - Base URL: `https://api.medium.com/v1/` - Rate limits: Unknown/not documented - SLA: None

---

🔑 Getting Integration Token

If you still want to use the limited API:

Process

1. **Log in to Medium**
   - URL: https://medium.com/
   - Log in with your account
2. **Go to Settings**
   - Click your profile (top right)
   - Select "Settings"
3. **Navigate to Security and Apps**
   - In left menu: "Security and apps"
   - Scroll down to "Integration tokens"
4. **Generate Token**
   - Click "Get integration token" or "New integration token"
   - Give token a description (e.g., "MyApp - Production")
   - Click "Get integration token"
5. **Store Token Securely**
   - ⚠️ Token shown only once
   - Copy and save in password manager
   - Token has **WRITE-ONLY** access
   - No expiration date (valid until deleted)

📚 Available API Endpoints

1. User Info

Endpoint: `GET /v1/me`

Requires: Bearer token in Authorization header

Response:

```
{
  "data": {
    "id": "user_id",
    "username": "username",
    "name": "Display Name",
    "url": "https://medium.com/@username",
    "imageUrl": "profile_image_url"
  }
}
```

---

2. User Publications

Endpoint: `GET /v1/users/:userId/publications`

Response:

```
{
  "data": [
    {
      "id": "publication_id",
      "name": "Publication Name",
      "description": "Description",
      "url": "https://medium.com/publication-name"
    }
  ]
}
```

---

3. Publish Article

Endpoint: `POST /v1/users/:userId/posts`

Body:

```
{
  "title": "Article Title",
  "contentFormat": "html",
  "content": "<h1>Title</h1><p>Content...</p>",
  "tags": ["tag1", "tag2", "tag3"],
  "publishStatus": "draft"
}
```

Parameters: - `title` (required): Article title - `contentFormat` (required): “html” or “markdown” - `content` (required): Article content - `tags` (optional): Array of tags (max 5) - `publishStatus` (required): “draft” or “public” - `canonicalUrl` (optional): For cross-posting

---

💻 Example Code (JavaScript)

Basic Setup

```
const MEDIUM_TOKEN = 'your_integration_token';
const API_BASE = 'https://api.medium.com/v1';

const headers = {
```

```
  'Authorization': `Bearer ${MEDIUM_TOKEN}`,
  'Content-Type': 'application/json',
  'Accept': 'application/json'
};
```

Get User Info

```
async function getMediumUser() {
  const response = await fetch(`${API_BASE}/me`, {
    headers: headers
  });

  const data = await response.json();
  return data.data;
}
```

Publish Article

```
async function publishArticle(userId, article) {
  const response = await fetch(`${API_BASE}/users/${userId}/posts`, {
    method: 'POST',
    headers: headers,
    body: JSON.stringify({
      title: article.title,
      contentFormat: 'html',
      content: article.content,
      tags: article.tags || [],
      publishStatus: 'public'
    })
  });

  const data = await response.json();
  return data.data;
}
```

⚠️ Limitations & Issues

No Verification Process

- ❌ No app registration
- ❌ No OAuth flow
- ❌ Only simple bearer token
- ❌ No scopes or permissions

Limited Functionality

- ❌ Cannot fetch/read articles
- ❌ No analytics or statistics
- ❌ No comment management
- ❌ No draft updates
- ❌ No article deletion

No Support

- ❌ No developer support
- ❌ No SLA or uptime guarantee
- ❌ GitHub repo archived
- ❌ No bug fixes or updates

Rate Limits

- ⚠️ Unknown and not documented
- ⚠️ No rate limit headers in response
- ⚠️ Risk of unexpected blocking

🔄 Alternatives

1. Unofficial APIs

MediumAPI.com - URL: https://mediumapi.com/ - Commercial product (paid) - More features than official API - Web scraping-based - ⚠️ Against Medium ToS

2. RSS Feeds

For Reading: - Each Medium publication has RSS feed - Format: `https://medium.com/feed/@username` - No authentication needed - Free and stable

3. Other Platforms

Consider: - **Dev.to:** Full API, developer-focused - **Hashnode:** GraphQL API, developer blogs - **Ghost:** Self-hosted, full API - **WordPress:** REST API, very extensive

---

🚨 Why NOT Use Medium?

For Production Apps: ❌ NOT RECOMMENDED

Reasons: 1. **No support** - API is abandoned 2. **No guarantees** - Could disappear anytime 3. **Limited functionality** - Write-only, no read 4. **No updates** - Bugs won't be fixed 5. **Business risk** - Could break your app without warning

---

✅ If You Still Use Medium

Best Practices

Error Handling (CRITICAL)

```
async function safePostToMedium(article) {
  try {
    return await postToMedium(article);
  } catch (error) {
    console.error('Medium API failed:', error);
    notifyUser('Medium posting failed, saved locally');
    saveArticleDraft(article);
    return null;
  }
}
```

Monitoring

- Monitor API uptime yourself
- Alert on failures
- Track error rates
- Have manual posting fallback

📞 Support & Resources

Official (Archived)

GitHub Repo: https://github.com/Medium/medium-api-docs (archived)

Last Update: March 2, 2023

No Support: - No developer support - No bug reports accepted - No feature requests

---

🎯 Recommendation

For new projects: ❌ DO NOT USE MEDIUM API

Consider: 1. Choose Dev.to, Hashnode, or Ghost for blogging APIs 2. If Medium important: use RSS feeds for reading 3. For posting: offer manual posting flow 4. Focus on platforms with active API support

---

Document Version: 1.0 **Last Updated:** February 8, 2026 **Status:** API DEPRECATED - NOT RECOMMENDED **Alternative:** Dev.to, Hashnode, Ghost
